SUMMARY

Full-Stack Software Engineer with 4+ years of experience building production web, mobile, and AI-enabled applications across fintech, enterprise, and applied AI domains. Owns modern frontend systems using React, React Native, and Angular, with strong expertise translating Figma designs into performant, user-centric interfaces. Experienced with Node.js, FastAPI, secure REST APIs, Stripe payment integrations, and AWS cloud services supporting scalable frontend workflows. Delivered measurable impact including 65% faster payment processing, 99.9% API uptime, and workflow improvements affecting 1,000+ users while shipping features end to end.

SKILLS

Frontend Engineering React, React Native, Angular, JavaScript (ES6+), TypeScript, HTML5, CSS3, Responsive Design, Mobile-First Design, Component-Based Architecture, Reusable UI Components, Frontend Performance Optimization, UI State Management, Accessibility (Semantic HTML, ARIA), Figma-to-UI Implementation

Backend Engineering & APIs Node.js, FastAPI, Python, RESTful API Design, API Integration, Authentication & Authorization (JWT, OAuth-style flows), Stripe Connect API, Stripe Identity API, Secure Payment Workflows, Server-Side Validation

Databases & Data Handling SQL, MongoDB, Relational & NoSQL Data Modeling, Data Validation, API-Driven Data Access

Cloud Platforms & Infrastructure Amazon Web Services (AWS): S3, RDS, Lambda, API Gateway, Cognito, Elastic Beanstalk, Cloud-Based Application Deployment, Environment Configuration, Secure Cloud Access

AI-Enabled Development LangChain, LangGraph, OpenAI API, Prompt Engineering, Vector Databases, Natural Language Processing (NLP), Applied Machine Learning, AI Workflow Orchestration

DevOps, Tools & Engineering Practices Docker, CI/CD Pipelines, Git, JIRA, Agile/Scrum Development, Code Reviews, Debugging & Troubleshooting, Production Monitoring, Cross-Functional Collaboration

Engineering Fundamentals Asynchronous Programming, Client–Server Data Flow, State Management Patterns, Input Validation & Error Handling, Code Reviews & Incremental Testing

EXPERIENCE

Software Engineer

June 2025 - Present

Impartial

- Improved donation transaction performance by 65% by owning frontend-heavy mobile payment workflows in the LawBux app using React Native, integrating real-time APIs built with Node.js and deployed on AWS, in close collaboration with backend engineers, product managers, and designers.
- Enabled 100% verified nonprofit onboarding by working cross-functionally with product, compliance, and backend teams to integrate Stripe Connect and Stripe Identity APIs, aligning frontend UI flows with KYC, identity verification, and payment requirements.
- Maintained 99.9% uptime for authentication and protected REST APIs by partnering with backend engineers to implement Amazon Cognito, JWT-based authorization, and secure access patterns across production environments.
- Owned frontend feature delivery end-to-end, including component design, state management, API integration, error handling, and performance optimization across mobile devices, ensuring consistent user experience in high-traffic donation flows.
- Actively participated in cross-functional sprint planning, code reviews, and release coordination, ensuring frontend changes were production-ready and aligned with backend contracts and product timelines.
- Optimized runtime behavior of frontend systems by managing asynchronous API calls, handling edge cases, and ensuring predictable client-side state updates under high-frequency transaction workflows.

Software Engineer

Dec 2019 - July 2023

Imaginnovate

- Led frontend modernization by migrating a legacy application to Angular and TypeScript, collaborating with design and product teams to translate Figma specifications into reusable, responsive UI components using PrimeNG.
- Reduced redundant logins by 66% by implementing Single Sign-On (SSO) and role-based access control, coordinating frontend session management with backend authentication services as part of an 8-member engineering team.
- Simplified order creation workflow from 6 steps to 3 on the JB Hunt logistics platform, redesigning frontend user flows and resolving UI-level issues impacting 1,000+ internal users.
- Improved internal order processing efficiency by 15% by fixing critical frontend–backend integration bugs, optimizing form validation, API interactions, and page navigation logic in a high-usage enterprise system.
- Owned frontend stability and maintainability by refactoring UI components, addressing technical debt, and improving consistency across screens, enabling faster feature updates and reduced regression issues.
- Improved correctness of frontend–backend interactions by refining input validation, handling edge cases, and ensuring reliable request–response flows across UI components.
- Collaborated closely with QA engineers and backend developers to debug production issues, validate fixes, and ensure smooth releases across environments within an agile delivery model.

PROJECTS

NextRoleAI: AI Job Market Intelligence Platform

Tech: React | FastAPI | LangGraph | LangChain | OpenAI API | Tavily

- Reduced manual job market research effort by 90%+ by building a frontend-driven AI platform that autonomously searches, parses, and analyzes live job postings using a LangGraph multi-agent architecture.
 - Designed and implemented a React-based frontend dashboard to surface structured insights such as trending skills, role demand, and hiring patterns, focusing on clarity, usability, and fast data consumption.
 - Built a FastAPI backend to orchestrate AI agents, external search integrations, and data aggregation, exposing clean APIs consumed by the frontend.
 - Integrated Tavily search and LLM-based analysis pipelines to transform unstructured job data into actionable, user-friendly insights.
- Impact:** Enabled faster, data-driven job research by replacing manual analysis with an automated, UI-centric AI system.

AI Video Content Assistant: Frontend-Driven AI Tool

- Developed an AI-powered application that converts long-form video content into structured summaries and actionable insights, reducing the need for manual note-taking and review.
 - Designed frontend user flows to present extracted insights in a clear, readable, and usable format, emphasizing information hierarchy and usability.
 - Implemented backend NLP pipelines to process transcripts and extract key themes, supporting the frontend with structured data outputs.
- Impact:** Improved productivity by streamlining how users consume and extract value from long-form video content.

EDUCATION

MS - Information Systems (3.83 GPA)

Aug 2023 - May 2025

Central Michigan University
